Subject: Mike Horse Dam

I personally do not want the contaminated soil moved until an independent study by those not involved in any way with the forest service or the mining company or the people who would be moving the soil, is done. What I am having a hard time understanding is why you want to move the contaminated soil from one site to contaminate another site. Why not just divert the water, place plastic or other water barrier material and concrete over and around the site sealing it off...if this can contain nuclear leaks, it can surly contain a bit of contaminated soil. It would be millions cheaper, quicker and we would not have to worry about the Blackfoot river being contaminated as I suspect no matter how many are against putting the contaminated soil near it, you will still do it.

Sincerely
Joy Aquino
